

QuantumTech – Winter Vacation Website Finalization Plan

Purpose of This Plan

This document defines a clear, step-by-step plan to finalize the QuantumTech website during winter vacation. The goal is not to sell products yet, but to make the website fully professional in design, structure, and clarity, so that summer vacation can be used entirely for operations, seller onboarding, and marketing.

Key Boundaries

- 1 No real selling during winter
- 2 Dummy products will remain until trusted sellers are found
- 3 No payment gateway or backend work
- 4 Website work only (UI, UX, structure)
- 5 Built using Cursor with GPT prompts (beginner-friendly)

Final Definition of "Website Finalized"

The website is considered finalized when it looks trustworthy, consistent, responsive, and clearly communicates that QuantumTech is a pre-launch tech store preparing for operations. The website should not require major redesign during summer vacation.

Phase 1: Direction & Structure

- 1 Lock brand positioning and tone
- 2 Finalize pages: Home, Products, Product Detail, About, How It Works, Contact, 404
- 3 Design section layout using Relume or simple notes
- 4 Stop adding or removing pages after this phase

Phase 2: Product Catalog & Pages

- 1 Create a single products data file (dummy data but realistic)
- 2 Build clean product cards
- 3 Build professional product detail page
- 4 Ensure product data is reusable across pages
- 5 Clearly mark site as pre-launch

Phase 3: Trust, Clarity & Brand Story

- 1 Write About / Our Promise page
- 2 Explain halal, honest, COD-focused business philosophy

- 3 Create How Ordering Will Work (Coming Soon) page
- 4 Add honest Contact information
- 5 Build a professional footer

Phase 4: UI/UX Polish

- 1 Use AI Studio to improve layout, spacing, typography
- 2 Ensure design consistency across all pages
- 3 Mobile responsiveness check
- 4 Add favicon, proper page titles, meta descriptions

Phase 5: Freeze & Handover to Summer Ops

- 1 Remove unused code and files
- 2 Document what needs to be done in summer (sellers, ops, marketing)
- 3 Ensure no website changes are required in summer
- 4 Final deployment and stability check

Daily Time Commitment (Realistic)

Daily effort during winter vacation should be limited to 2–3 hours. Each day should focus on one improvement only. Consistency is more important than speed.

Completion Checklist

- 1 All planned pages exist and work
- 2 Dummy products are structured and controlled from one file
- 3 Website clearly states pre-launch status
- 4 Mobile and desktop views are clean
- 5 Brand looks calm, professional, and trustworthy
- 6 Website is ready for summer operations without redesign
